

The table below illustrates the final measured pH of 100% Tacsimate at four different pH levels when two different stocks are mixed in varying ratios. One can use this information to create 100% Tacsimate stocks at pH levels between pH 4-5, 5-6, 6-7, 7-8 and 8-9. These stocks can then be diluted to the desired final concentration in conjunction with other reagents.

100% Tacsimate Dilution & pH Table														
HR2-823 HR2-825			HR2-825 HR2-827			HR2-827 HR2-755			HR2-755 HR2-829			HR2-829 HR2-813
